

### Project Overview

This award winning project “Canterbury College” involved the construction of a new library block, administration building and a two level classroom building together with the refurbishment of the existing junior and middle school classrooms. The new built area has a floor area of 4000m<sup>2</sup>. The building is a concrete structure with extensive face brickwork and metal roofing. The project was completed in 6 stages over a 12 month period. Working within a school that was fully functional required constant care and consideration of the learning environment. The junior school refurbishment required handovers each term so that the holidays were used to move classrooms into completed buildings whilst we would take over another building for refurbishment.
