

Project Overview

Construction of new 80 bed Aged Care Facility attached to the existing Dalby Hospital which provides high care facilities and services to patients. Due to infamous black soil, the whole complex was built on a raised platform that was created by importing 1.5mtrs deep of fill across the entire site, to combat differential movement. The ground slab was also constructed as a 'thickened raft' The complex was completed ahead of schedule and to a very high standard of finish.
